

THE TRAVEL ALL-IN-ONE

 **Verso³**

THE TRAVEL ALL-IN-ONE

Verso³

The Verso is a lightweight reversible airbag harness with seat plate and underseat rescue container.

It's ideal for leisure pilots, hike 'n fly pilots and travellers, yet is comfortable enough to be used on long cross-country flights and also has good safety features. The unique double-skin feature means your harness is always protected from bumps and scrapes when the Verso is used in rucksack mode.

Since its introduction, the Verso has been one of the best selling harnesses in its class. This 3rd generation stays true to the original but features improvements over its predecessor in several areas.

- more stable in all axes due to new ABS webbing system
- 600g lighter and decreased packing volume
- reduced drag due to reduced cross sectional area
- unique double-skin feature protects harness when used in rucksack mode
- cleaner and easier rescue flap system for faster rescue deployment
- improved airbag pre-inflation: the airbag is 70% inflated at take-off
- faster airbag inflation and more stable pressure maintained during turns
- lighter and more durable main fabric

The Verso 3 is a reversible harness with a unique combination of features:

- highly effective airbag with seat plate
- double skin surface
- underseat rescue
- unique zipper system

REDUCED WEIGHT, INCREASED DURABILITY

Thanks to lighter but more durable materials and a more efficient construction, we have managed to reduce the weight of the Verso 3 by 600g compared to the Verso 2.

DOUBLE-SKIN RUCKSACK

The unique double-skin feature protects the harness when used in rucksack mode. You don't have to worry about damaging your harness at the airport or on the trail.

EASY CLOSING, TIME AFTER TIME

The Verso 3 features a unique packing system. The lateral zipper is easier to close and has a longer lifetime due to the reduced strain. In addition, the load is divided into 2 compartments.

DETAILS

- New ABS webbing system with T-Lock buckle system
- Highly effective pre-inflation system
- G-chute pocket with shackle
- Colour coded regulation straps (red for shorten, black for lengthen) and carabiner loops
