CRAFTED FOR ADVENTURE

 **Explorer**

CRAFTED FOR ADVENTURE

Explorer

On its original launch, the Explorer created a new category of lightweight XC wings, offering great performance whilst remaining relatively undemanding to fly.

Today, the Explorer is considered the reference. As a result, we decided to refresh the design in line with that of our current new wings.

KATANA BLADE DESIGN

The design resembles the single edged curved blade, a design which was prevalent in China and Korea and later refined to perfection in Japan.

The spirit of these old craftsmen has long been an inspiration for Gin Seok Song and his team of designers and test pilots.

CONCEPT

Like a paraglider, a katana appears relatively simple on the surface. Yet the best results can only be achieved by the highest levels of craftsmanship. The key to producing a hard yet flexible curved blade is in the differential hardening process where the heating and cooling speeds of different parts of the blade are strictly controlled by the master swordsmith.

The end result is a blade which not only performs optimally, but also embodies the spirit of its creator and even stands as a work of art.
