# Introducing the Yeti 4

The Yeti 4 is a versatile paraglider, suitable for hike 'n fly or for thermalling and leisurely XC's. Due to the wide range of sizes, the wing accomodates a wide range of pilots: from beginners and pilots flying less frequently to experienced adventure pilots.

## Designed for simplicity

The Yeti 4 brings comfort, ease and simplicity to lightweight paragliding.

The Yeti 4 is a 3-liner and is simple to sort out on the ground. It inflates easily and evenly, even when the terrain or conditions are less than ideal. The low stall speed gets you airbourne quickly and provides a good safety margin for landings. In flight, the turn is responsive and playful, but always co-ordinated and comfortable.

## More than just an "ultralight glider"

Our latest EPT airfoil means significantly more glide performance than you might expect from such a stable, low-aspect wing. What's more, the climb is outstanding—you can get tightly into thermal cores. The Yeti 4 feels so secure that even in the most challenging conditions you'll be turning back for more.

Finely crafted from the most durable lightweight materials, you can expect a long lifetime with normal, careful use. The Yeti utilizes the latest generation of double-coated Skytex fabrics from Porcher Sport.

### Easy or dynamic, ultra-light or extreme-light—it's your choice

The Yeti 4 has a wide certified weight range. Flown in the mid to lower part of the weight range, low-airtime pilots will discover an easy, well-behaved wing. Flown closer to the top of the range, suitably experienced pilots can enjoy dynamic flying in stronger conditions.

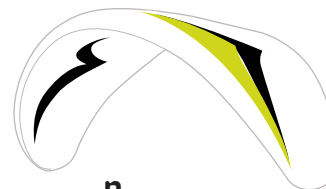

The Yeti 4 comes with standard Kevlar risers and sheathed main and mid- lines for ease of use and durability. A optional Dyneema riser saves around 300g and makes the Yeti one of the lightest wings of its type.

All in all, the Yeti is an outstanding choice for all pilots who prefer minimal equipment and maximal fun. Try it for yourself and discover love at first flight!
