Stable descent

Excellent sink rate

Rapid opening

# Yeti Cross - product information

The Yeti Cross is a lightweight, square-type rescue parachute developed by Gin Gliders. It offers a stable descent with excellent sink rate and opening characteristics.

## **Stable descent**

The Yeti Cross very quickly dissipates the pendulum motion typically seen with circular-type rescue parachutes, due to the square shape and strategic placement of the air dispersement vents. A stable, pendulum-free descent is achieved shortly after deployment.

## **Excellent sink rate**

The unique design of the canopy maximizes the surface area and efficiency. Optimized air channeling decreases the descent rate to well below the certification requirement of 5.5m/s.

## **Rapid and smooth opening**

The Yeti Cross opens rapidly and smoothly, due to the enhancements made to the canopy profile and rescue packing procedure.

# Yeti Cross - technical specification

The Yeti Cross has EN certification  
EP 107.2013

Size	#26	#32	#38
Area (m <sup>2</sup> )	26.07	31.62	38.08
Line length (m)	5.26	5.79	6.35
Center line (m)	5.34	5.88	6.45
Weight (kg)	1.3	1.5	1.7
Sink Rate (m/sec.)	5.03	4.87	4.8
Max load (kg)	86	104	126
